VURT Pixel & Tracking Plan

MARCH 19, 2026 | PREPARED BY DIONI VASQUEZ | FOR: INTERNAL TEAM + PAID ADS TEAM

Critical Technical Context

myvurt.com runs on Enveu (Angular SPA). URL structure:

PHASE 1 Foundation Pixels (Start Here)

These are the highest-value touchpoints. Get these live first.

1. Landing / Entry Pixel

What: Fires when a user lands on the site (any page)

Pages: `myvurt.com/` (homepage), series pages, `myvurt.com/about-us`, `myvurt.com/contact-us`

Why: Baseline for all attribution. Tells you which ad/source drove the visit.

DATA TO CAPTURE:

- Referral source (UTM params: `utm_source`, `utm_medium`, `utm_campaign`, `utm_content`)
- Device type (mobile/desktop/tablet)
- Timestamp
- Session ID (for stitching the full journey)

2. Age Gate Completion Pixel

What: Fires when user confirms they're 17+ and enters the site

Page: Homepage age gate modal

Why: First real engagement signal. Measures drop-off between landing and actually entering. If 60% of paid traffic bounces at the age gate, that's critical intel.

3. Play Button Pixel (PRIORITY P0)

What: Fires when a user clicks play on any series/episode

Page: Player component on series page (episode selection is within the series URL — fires on click event, not page load)

Why: The money metric. Tells you: "Did the person we paid to bring here actually watch something?"

DATA TO CAPTURE:

- Series title / Series ID

- Episode number
- Source (which ad/campaign drove them)
- Time from landing to first play
- Device type

4. View Duration / Watch Time Pixel

What: Fires at intervals during playback (25%, 50%, 75%, 100% completion)

Page: Player component

Why: A click isn't a watch. Someone who watches 10 seconds vs. the full episode are completely different signals. This is what tells you which content is actually sticky.

5. Registration / Sign-Up Pixel (PRIORITY P0)

What: Fires when the registration gate appears AND when user completes sign-up

Page: Registration modal (appears after X number of watches)

Why: This is your primary conversion event. The full funnel is: Ad → Land → Watch → Register.

Two separate pixels needed:

- **Gate Shown:** How many users hit the registration prompt
- **Registration Complete:** How many actually signed up

6. App Download Pixel (PRIORITY P0)

What: Fires when user clicks iOS App Store or Google Play download links

Why: Measures cross-platform conversion. Did your web traffic convert to app installs?

Note: Pair with App Store attribution (Apple SKAdNetwork / Google Install Referrer) for full install tracking

PHASE 2 Behavior & Navigation Pixels

7. Categories Page Pixel

Why: When you drive paid traffic to a specific show, this tells you what else those users explore. If everyone who watches "Come Back Dad" then browses Drama, that's targeting gold.

8. Series Browse / Thumbnail Click Pixel

Why: Interest signal before commitment. Which thumbnails get clicks vs. which get skipped tells you about creative effectiveness.

9. "My List" Add Pixel

Why: Intent signal. This is someone planning to come back. High-value retargeting audience.

10. Submit Your Series Page Pixel

Why: Creator acquisition funnel. If you run creator-facing ads, this is the conversion.

11. Share / Social Action Pixel

Why: Organic amplification signal. Which content do people share? That's your best-performing creative for future ads.

Note: The share button generates Enveu deep links. The pixel should capture when the share action is triggered and which link is generated.

PHASE 3 Advanced Tracking

12. Scroll Depth Pixel

Fires at scroll milestones (25%, 50%, 75%, 100%) on homepage

13. Session Replay / Heatmap Integration

Visual recording of user sessions — Tools like Hotjar or FullStory

14. Return Visit Pixel

Retention signal. Did the paid traffic come back organically? That's the real ROI.

15. Individual Show Pixels (1,000+ Titles)

Don't pixel all 1,000 at once. Start with the 10-15 titles you're actively pushing via paid. Use a dynamic pixel that captures the series ID as a parameter.

Recommended Pixel Architecture

Don't Deploy 1,000 Pixels — Deploy 1 Smart Pixel

1. **One base pixel** on every page (handles landing, session, device, UTM capture)
2. **Event listeners** for episode-level and in-player actions:
   - `event: play` + `series_id: xyz` + `episode: 3`
   - `event: register_gate_shown`
   - `event: register_complete`
   - `event: category_browse` + `category: drama`
   - `event: app_download` + `platform: ios`
   - `event: share` + `series_id: xyz` + `enveu_link: vurt.enveu.link/abc123`

3. **UTM parameter persistence** — UTMs from landing URL must be stored and passed with every subsequent event

UTM Structure for Campaigns

```
?utm_source=[platform]&utm_medium=[paid|organic]&utm_campaign=[campaign_name]&utm_cont
```

Examples:

- `?utm_source=instagram&utm_medium=paid&utm_campaign=come_back_dad_launch&utm_content=trailer_v2`
- `?utm_source=tiktok&utm_medium=paid&utm_campaign=top10_awareness&utm_content=kevin_hart_clip`

Google Analytics (GA4) Setup — Parallel Track

GA4 EVENT	MAPS TO	PURPOSE
`page_view`	Landing pixel	Traffic source attribution
`play_content`	Play button pixel	Content engagement
`watch_progress`	View duration pixel	Watch depth
`sign_up`	Registration pixel	Conversion
`app_cta_click`	App download pixel	Cross-platform
`share_content`	Share pixel	Virality
`add_to_list`	My List pixel	Retention intent

Priority Summary

PRIORITY	PIXEL	WHY IT'S CRITICAL
🔴 P0	Landing / Entry	Can't attribute anything without this
🔴 P0	Play Button	Core engagement metric
🔴 P0	Registration Complete	Primary conversion
🟠 P1	View Duration	Quality of engagement
🟠 P1	App Download Click	Cross-platform conversion
🟠 P1	Age Gate Completion	Funnel drop-off diagnosis
🟡 P2	Categories Browse	Audience interest mapping
🟡 P2	Thumbnail Clicks	Creative/content testing
🟢 P3	My List, Share, Scroll	Behavioral depth

User Journey Map (Point A → Point Z)

```
[Ad / Social Post / Organic Search]
        │
        ▼
   ① LAND on myvurt.com ←── Landing Pixel
        │
        ▼
   ② AGE GATE (17+ confirm) ←── Age Gate Pixel

   ⑨ RETURN VISIT ←── Return Visit Pixel
```

What the Paid Ads Team Needs From VURT Dev/Enveu

1. **Access to inject JavaScript** on the site (for pixel code + event listeners)
2. **DOM element identifiers** — CSS selectors or data attributes for: play button, registration form, age gate, category nav, share buttons, app download links
3. **Player API access** — Does Enveu's video player expose playback events (play, pause, progress, complete)?
4. **Confirmation of registration gate logic** — After how many watches does it appear? Is it configurable?
5. **GTM (Google Tag Manager) container** — Easiest way to deploy and manage all pixels from one place
