SOLANA MOBILE RFP-TRACK BUILDER GRANT

U$ER

DAPP QA LAYER

The **pre-launch QA infrastructure** Solana Mobile has been missing. Device-verified. Community-powered. Already generating revenue.

SEE THE ASK →

GRANT CRITERIA

REQUESTED AMOUNT

$15K

USDC · Solana Mobile Builder Grant

<90 DAYS TO LAUNCH	$3K REVENUE TODAY
11 DAPPS TESTED	0 COMPETITORS

- App built & in testing — grant funds the final push

THE GAP

435+ DAPPS. ZERO QA INFRASTRUCTURE.

The dApp Store grew from 160 to 435+ in under 6 months. Seeker shipped to 150K+ users across 50+ countries. Builders launch fast — but there's no systematic way to test on real Solana Mobile hardware before shipping.

0

STRUCTURED QA PLATFORMS FOR SOLANA MOBILE

435+ DAPPS IN STORE	**150K+** SEEKER USERS SHIPPED
50+ COUNTRIES	**6MO** GROWTH WINDOW

WHY EXISTING APPROACHES FAIL

Skip QA — ship and pray
✗ Users hit Seeker-specific bugs never caught in dev

Quest platforms (Layer3, Galxe, Zealy)
✗ Measures clicks, not quality — vanity metrics, zero bug reports

Superteam Earn bounties
✗ Unstructured, no device verification, no sequential flows

Discord recruiting
✗ Inconsistent feedback, no accountability, sybil-vulnerable

Apple has **TestFlight**. Google has **Firebase Test Lab**. Solana Mobile has **nothing equivalent** — until now.

THE SOLUTION

U$ER: THE OPEN MOBILE QA LAYER

🔐 **DEVICE-VERIFIED ONLY**

Gated by Genesis SBT on verified Saga/Seeker devices. Daily wallet snapshots. One wallet per profile. No sybils.

📱 **BUILT ON SOLANA MOBILE STACK**

Mobile Wallet Adapter (MWA) for signing. Seed Vault for auth. Native to the ecosystem.

💰 **REVENUE-GENERATING TODAY**

dApp teams pay for campaigns. $3,000+ earned — ~80% flows directly to tester prize pools.

✅ **PROVEN METHODOLOGY**

11 dApps tested via SagaDAO Innovation Lab. Critical bugs caught pre-launch across every round.

OPEN ECOSYSTEM EQUIVALENT

U$ER is the **open-ecosystem TestFlight** — but device-verified, community-powered, and permissionless. No gatekeepers. Real Solana Mobile hardware owners giving real feedback.

🍎 **TESTFLIGHT**
Apple-only closed

🤖 **FIREBASE**
Google-only closed

⚡ **U$ER**
Open. Permissionless.

THE METHOD

THREE-STAGE TESTING STRUCTURE

Builders create campaigns moving testers through three sequential stages — progressively deeper interaction, higher-quality feedback.

STAGE 01

UX WALKTHROUGH

- → Observe onboarding flow end-to-end
- → Surface friction points and confusion
- → Identify drop-off moments
- → Filters completely unengaged testers

Surface & Friction Detection

STAGE 02

CORE FEATURE TESTING

- → Complete specific in-app tasks
- → Submit 150+ character feedback
- → Assess comprehension and UX logic
- → Filters low-intent users

Deep UX + Feature Validation

STAGE 03

PROOF OF INTERACTION

- → Submit tx confirmations + screenshots
- → Confirm full genuine engagement
- → Unlocks largest reward tier
- → Builds Proven Tester Cohort over time

Evidence-Based Completion

COMMUNITY GATING

All testers gated by **Solana Mobile Genesis SBT** minted on verified Saga/Seeker devices. Daily wallet snapshots. One wallet per profile. **Real device owners only.**

SUSTAINABILITY MODEL

We've earned **$3,000 from live clients** with ~80% flowing to tester prize pools. The model is already sustainable — grant funds accelerate productization of a **proven, working system**.

Public Good Commitment: Free for hackathon winners. Published benchmarks benefit all builders. Integrates with Guardians for data-driven curation.

MARKET POSITION

MONOPOLY POSITION. NO DIRECT COMPETITORS.

🏆

FIRST MOVER IN STRUCTURED, DEVICE-VERIFIED QA FOR SOLANA MOBILE

No other platform in the Solana ecosystem offers structured, device-verified QA for Solana Mobile dApps. U$ER fills a critical infrastructure gap with zero direct competition today.

✓ **Device Verification**
Genesis SBT gating ensures only real Saga/Seeker owners participate — no other platform has this.

✓ **Sequential Campaign Structure**
Three-stage methodology filters low-intent users and surfaces genuine, high-signal feedback.

✓ **Revenue Before Grant**
$3,000 earned from clients before asking for funding — not speculation, not prototypes.

✓ **Complements Guardians**
Guardians curate "trusted" apps. U$ER proves "does it actually work?" — strengthening the ecosystem.

Guardians surface what's trusted. U$ER surfaces what's **verified to work**. Together: a complete quality signal for the permissionless dApp Store.

EXECUTION PLAN

90-DAY ROADMAP

dApp Store launch on Day 90. Three focused months from grant to live.

MONTH 01

BUILD & INTEGRATE

- → Finalize UI polish + production quality
- → MWA & Seed Vault integration
- → SBT verification system
- → Push notification infrastructure
- → Reward automation pipeline

Production-Ready App

MONTH 02

BETA & OPTIMIZE

- → Controlled beta launch
- → Run 3–5 live campaigns
- → Optimize feedback tracking
- → Tester badges & profiles
- → Iterate on reward flows

Proven Beta with Live Data

MONTH 03

LAUNCH

- → dApp Store submission & launch
- → Onboard builders at scale
- → First fully automated campaign
- → Publish ecosystem metrics
- → Free tier for hackathon winners

Day 90 — dApp Store Live

GRANT RECEIVED → DAY 1 ——— DAPP STORE LAUNCH → DAY 90

BUDGET BREAKDOWN

USE OF FUNDS

Accelerating a working product — not funding speculation.

📱 Mobile UX production polish	$3,000
🔒 Security review (reward logic)	$2,000
🔔 Push notification infrastructure	$2,000
⚙️ Backend scaling & verification	$3,000
💵 Initial USDC liquidity for campaigns	$3,000
🚀 Deployment & launch costs	$2,000

TOTAL REQUESTED

$15K

USDC · One-time grant

WHY THIS IS LOW RISK

The app is **already ~80% built**. We've already generated **$3,000 in revenue** from live clients. These funds accelerate productization of a proven system — execution risk is minimal. Impact is immediate.

LONG-TERM IMPACT

THE STANDARD QA LAYER FOR SOLANA MOBILE

01 PRE-LAUNCH LAYER FOR ALL BUILDERS
Every dApp heading to the Solana Mobile Store runs through U$ER first. Bugs caught before users see them.

02 VERIFIED TESTER NETWORK
A growing cohort of proven, device-verified testers who earn USDC for real contributions — a sustainable QA economy.

03 FEEDBACK ACCELERATOR
Published benchmarks and open metrics that make every builder's launch better — even if they don't use U$ER directly.

04 EVOLVES WITH THE ECOSYSTEM
Scales with Solana Mobile growth, supporting permissionless innovation as the dApp Store expands globally.

The dApp Store is scaling rapidly. **Quality infrastructure must scale with it** *— an open mobile ecosystem where builders own their launches without gatekeepers, without Apple, without Google.*

PERMISSIONLESS BY DESIGN

Open infrastructure for the open ecosystem. Community-owned QA that improves the dApp Store for everyone — builders, testers, and users alike.

SOLANA MOBILE RFP-TRACK BUILDER GRANT

FUND THE OPEN QA LAYER.

The app is built. The revenue is real. The market gap is clear.
We're asking for $15K USDC to cross the finish line.
